SCREENING REPORT FOR AN ENVIRONMENTAL AUTHORIZATION AS REQUIRED BY THE 2014 EIA REGULATIONS – PROPOSED SITE ENVIRONMENTAL SENSITIVITY

EIA Reference number:

Project name: Nooitgedacht Pipelines

Project title: Nooitgedacht Pipelines

Date screening report generated: 02/08/2024 10:29:35

Applicant: Harmong Gold

Compiler: John von Mayer (EIMS)

Compiler signature:

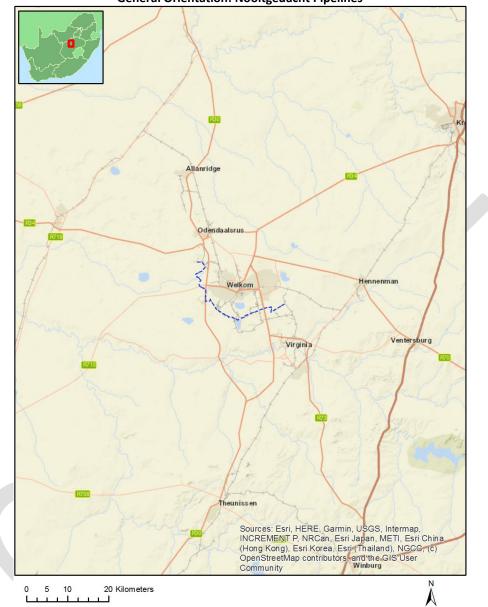

Application Category: Mining | Beneficiation | Mineral

Environmental Management Frameworks relevant to the application

No intersections with EMF areas found.

Environmental screening results and assessment outcomes

The following sections contain a summary of any development incentives, restrictions, exclusions or prohibitions that apply to the proposed development site as well as the most environmental sensitive features on the site based on the site sensitivity screening results for the application classification that was selected. The application classification selected for this report is: **Mining |Beneficiation |Mineral**.

Relevant development incentives, restrictions, exclusions or prohibitions

The following development incentives, restrictions, exclusions or prohibitions and their implications that apply to this site are indicated below.

Disclaimer applies 02/08/2024

Incentive, restriction or prohibition	Implication
Strategic Transmission	https://screening.environment.gov.za/ScreeningDownloads/Developmen

Proposed Development Area Environmental Sensitivity

The following summary of the development site environmental sensitivities is identified. Only the highest environmental sensitivity is indicated. The footprint environmental sensitivities for the proposed development footprint as identified, are indicative only and must be verified on site by a suitably qualified person before the specialist assessments identified below can be confirmed.

Specialist assessments identified

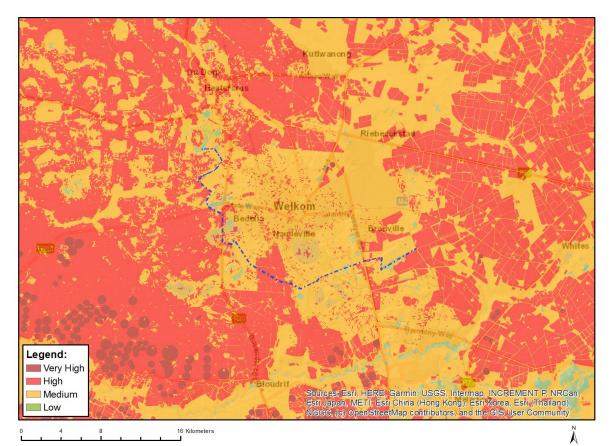

Based on the selected classification, and the known impacts associated with the proposed development, the following list of specialist assessments have been identified for inclusion in the assessment report. It is the responsibility of the EAP to confirm this list and to motivate in the assessment report, the reason for not including any of the identified specialist study including the provision of photographic evidence of the site situation.

Results of the environmental sensitivity of the proposed area.

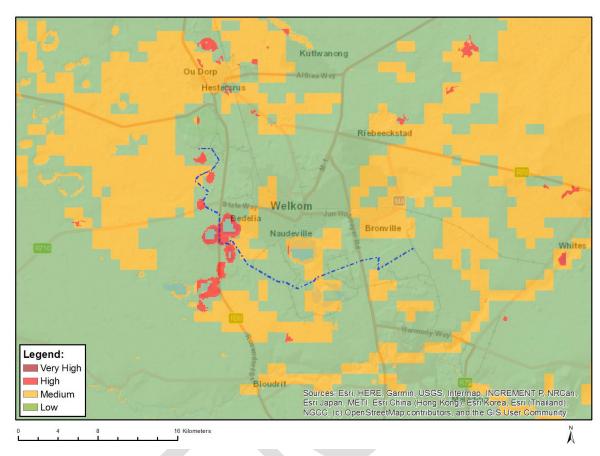

The following section represents the results of the screening for environmental sensitivity of the proposed site for relevant environmental themes associated with the project classification. It is the duty of the EAP to ensure that the environmental themes provided by the screening tool are comprehensive and complete for the project. Refer to the disclaimer.

MAP OF RELATIVE ANIMAL SPECIES THEME SENSITIVITY

Where only a sensitive plant unique number or sensitive animal unique number is provided in the screening report and an assessment is required, the environmental assessment practitioner (EAP) or specialist is required to email SANBI at <u>eiadatarequests@sanbi.org.za</u> listing all sensitive species with their unique identifiers for which information is required. The name has been withheld as the species may be prone to illegal harvesting and must be protected. SANBI will release the actual species name after the details of the EAP or specialist have been documented.

PREPARED FOR:

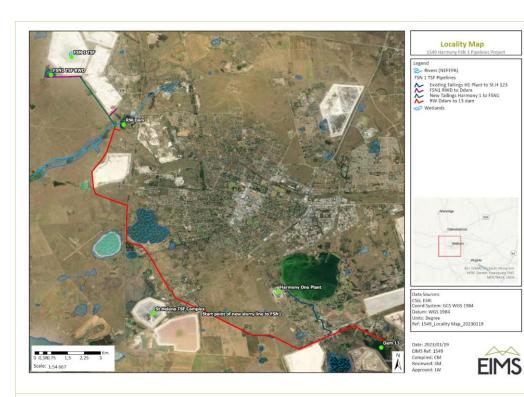

Environmental Site Sensitivity and Verification Assessment

	1						
Site ID:		Harmony Project	y FSN1 Pipelines	Contractor:	EIMS		
Location:		Welkom Province	area, Free State	Inspector:	Sinalo Matshon	a	
Client representative:		Brian Wł	nitfield	Inspection Date:	26 January 202	3	
-							
1. Background							
Background of the project:	 the Harmony One Plant is located south of the town Welkom. Harmony One Plant is currently depositing half of tailings onto the Free State South (FSS) 2 Tailings Storage Facility (TSF) and the other half onto the recommission St. Helena 4 TSF. These two facilities have deposition capacity until the end of June 2024 at which time another deposition site will required to accept the tailings from Harmony One Plant. The existing Free State North (FSN) 1 TSF has been select as the next deposition site. Harmony Gold Mining Company is planning to construct new pipelines and associated infrastructure to be utilis for the transport tailings and return water as indicated in the below section. 						
			.		Location (DD MM	M SS)	
Project Aspects:	Yes	No	Details (provide spec	cifications)	Latitude	Longitude	
 Return water pipelines 	\boxtimes		diameter and an av	iter pipelines (with a 600mm verage flow rate of 500 l/s),	Return water pipeline from Harmony FSN1 Return Water Dam to D-Dam Complex		
			Water Dam to D-L return water pipelir	Storage Facility (TSF) Return Dam complex and two new nes (with a 600mm diameter v rate of 500 l/s) from D-Dam	<u>Start Point</u> 27°55'45.17"S	26°39'16.60"E	
			proposed return wa 23.5 km.	. The estimated length of the ter pipelines is approximately be flanged steel pipeline and	<u>Mid-Point</u> 27°56'7.66"S	26°40'23.18"E	
				ound on pre-cast concrete	<u>End point</u> 27°56'31.02"S	26°41'0.66"E	
					Return water pi to Dam 13	peline from D-Dam Complex	
					Start Point 27°57'3.65"S	26°41'5.38"E	

			<u>Mid-Point</u> 28° 1'27.39"S	26°43'3.46"E
			<u>End point</u> 28° 2'15.88"S	26°47'37.24"E
 Slurry pipelines 		Three new tailings pipelines (with a 450mm diameter and an average flow rate of 250 l/s), from Harmony One Plant to FSN 1 TSF. The estimated length of each of the proposed slurry	<u>Start Point</u> 28° 1'27.39"S	26°43'3.46"E
		pipelines is approximately 23 km and running	Mid-Point	
		along the same route/servitude. One tailings pipeline (with a 550mm diameter and	27°58'53.52"S	26°41'15.74"E
		an average flow rate of 390 l/s), from Saaiplaas Plant, currently depositing onto St. Helena TSF will be extended in future to the FSN1 TSF complex. The pipelines will be flanged steel pipeline and installed above-ground on pre-cast concrete plinths.	<u>End point</u> 27°55'44.57"S	26°40'6.45"E
 Access road 		A 3.5m wide access road, adjacent to the pipelines, will be cleared/graded to provide access for construction, maintenance and	<u>Start Point</u> 27°55'45.08"S	26°39'16.20"E
		inspections.	<u>Mid-Point</u> 27°59'45.00"S	26°41'14.57"E
			End point 28° 2'15.90"S	26°47'37.31"E
 Booster pump station 		A booster pump station will be constructed at St Helena TSF Complex. The booster pump station will consist of pumps and electrical infrastructure to supply the pumps with power. The footprint of the proposed booster pump station will be less than a 1 ha.	Approximate point: 28° 1'27.39"5	26°43'3.46"E
. Site Layout Plan				

Commented [LW1]: Are we sure about the distance? I find it difficult to understand that the RW pipelines are the same distance as the SP?

Commented [SM2R1]: BW may you please confirm the distances for the pipelines with HGM, I followed the routes on google earth an it shows me the slurry pipe is just below 15km in length while the total length of the return water pipelines is about 20km.

3.1 Site Assessment (F	Pipelines and associa	ted infrastructure)		
3.1.1 Gradient (indica	te the general gradie	ent characteristics of site)		
Aspect	Ridge Line Plateau	Moutherin Slope /	Open Variey	Closed Valley Plain Blain Cost Mils
Pipeline infrastructure area				
Is the site located on o	or in the immediate	vicinity of any of the following	g:	
		Yes	No	Comment
Erosion Channels or erosion/ destabilized			\boxtimes	No severe erosion was observed onsite.
Wetlands (within 32m	1)			A number of water courses occurs within close proximity to the pipeline route, this includes artificial wetlands such as return water dams. The pipeline also directly crosses a stream with an associated floodplain wetland and a depression wetland (Toronto Pan) will also be traversed.
Unstable slopes or g (rocky outcrops)	geological features			No rocky outcrops were observed along the pipeline route.
Bare areas				Bare soil was observed for the areas which have been cleared to create access roads used for maintenance and inspections as may be required by the Applicant.
Other Sensitive or risk	s areas?			A sensitive ecological species habitat was identified along the pipeline route and it is recommended that this area be avoided completely. The other social risk associated with the current route include the concerns which were raised by the communities residing at the Theronia hostel near the sewage water treatment works. The communities raised that the pipeline may lead to difficulties with access into their houses and may cause traffic issues and collision accidents for motorists. It was also indicated that the pipelines may damage the kraals as they will be passing close to them.
Are any existing servitudes and structures directly or indirectly affected by the proposed sites and routes (e.g. Eskom, public road servitudes and restrictions- 60m from National Road, farmer's water/irrigation supplies, etc.)?				 The following existing servitudes were identified at different sections along the proposed pipeline route: Existing tailings and/or return water pipelines were identified along the pipeline route. Some sections of the pipeline route are along the provincial road (R30). The pipelines will remain adjacent to the

	existing road servitudes and a few road crossings have been identified (the provincial roads authority and South African National Roads Authority (SANRAL) will be consulted in this regard).
	 The pipeline will pass near existing local access roads (paved and unpaved).
	 It was indicated that there a Sedibeng Water pipeline servitude exists along the pipeline route and this will be confirmed through consultation with Sedibeng Water.
	• Some overhead powerlines were also

- noted along the pipeline route.

3.1.2 Vegetation

Which of the listed descriptions best describes the general groundcover on and around the site?

Natural veld - good condition	Natural veld Natural veld with heavy scattered alien infestation		Gardens 🗌			
Sport field	Cultivated land	Paved surface 🔀	Building or other structure 🛛	Bare soil 🔀		
Comments on composition:	-	ne vegetation along and arour rasslands with scattered alien v	and the proposed pipeline route is me egetation.	ostly regarded as degraded		
Comments on weed spec	ies/type ex	The vegetation onsite consists of a natural veld in some areas with scattered alien vegetation. The exact type and species will be confirmed in the Terrestrial Biodiversity Assessment which will thoroughly study the plant species theme onsite.				
3.1.3 Land cover/ use des	cription: Describ	be the land uses on the site				
Pipelines and and other infrastructure associated with the existing pipelines and other mining activities, thus the area can be described as largely disturbed. Parts of the surrounding landscape is used for informal cattle grazing. Other elements of disturbance identified within the study area include local access roads (paved and unpaved) and provincial roads and other infrastructure associated with the existing pipelines and other mining activities (including pump stations return water dams, tailings storage facilities and maintenance access roads). The pipeline route mostly falls near existing provincial roads as well as local access roads (paved and unpaved). A watercourse (pan) exists near the pipeline route where local fishing activities have been noted. The pipeline crosses near residential properties with kraals for cattle. Cultivated land was also noted near the pipeline route.						

4. General Comments and Recommendations

The following recommendations have been made by the specialists and the EAP:

- The avoidance of the identified sensitive species area is recommended by the Terrestrial Biodiversity Specialist. ٠
- The avoidance and spanning of the Toronto pan by moving the pipeline to the western side of the road is recommended as this is ٠ the least sensitive area.
- A desktop paleontological study has been recommended by the heritage specialist and is required by SAHRA as the site falls within • high and very high paleontological sensitive areas as indicated in the SAHRA PaleoMap. Consultation with the provincial roads authority, affected residents, local municipality and other parties with existing servitudes in
- the areas is recommended.

6. Verification findings and motivation:

The following table provides a ranking of actual sensitivity observed on site against the sensitivity suggested by the National DFFE Screening Tool. A list of the specialist studies to be undertaken was also generated by the Screening Tool, the level of assessment which will be undertaken is shown below and motivation is also provided specifically where the Screening Tool suggested studies are deemed not applicable to this project and therefore will not be undertaken.

Assessment for specialist st	udies and motiva	tion:			
Screening Tool Specialist Study Required:	Level of sensitivity suggested by the screening tool:	Level of sensitivity suggested from site screening and sensitivity verification:	Required level Assessment	of	Motivation
			None.	\boxtimes	The site sensitivity verification has
Landscape/Visual Impact Assessment	Low	Low	Compliance Statement		confirmed that the proposed pipelines and associated infrastructure will have a low visual impact as the proposed project is currently in line and complements the
			Full Assessment		existing land-uses which are mainly mining activities, hence an impact assessment is
			Other		not deemed necessary for this particular activity.
			None.

			Other		

- An applicant intending to undertake an activity identified in the scope of this protocol, on a site identified by the screening tool as being of "very high" or "high" sensitivity for terrestrial animal species must submit a Terrestrial Animal Species Specialist Assessment Report.
 - An applicant intending to undertake an activity identified in the scope of this protocol on a site identified by the screening tool as being of "medium sensitivity" for terrestrial animal species must submit either a Terrestrial Animal Species Specialist Assessment Report or a Terrestrial Animal Species Compliance Statement, depending on the outcome of a site inspection undertaken in accordance with paragraph 4.

 - An applicant intending to undertake an activity identified in the scope of this protocol on a site identified by the screening tool as being of "low" sensitivity for terrestrial animal species must submit a Terrestrial Animal Species Compliance Statement. Where the information gathered from the site sensitivity verification differs from the screening tool designation of "very high" or "high," for terrestrial animal species sensitivity and it is found to be of a "low" sensitivity, then a Terrestrial Animal Species • Compliance Statement must be submitted.

Assessment for specialist studies and motivation:							
Screening Tool Specialist Study Required:	Level of sensitivity suggested by the screening tool:	Level of sensitivity suggested from site screening and sensitivity verification:	Required Assessment	level	of	Motivation	

- Where the information gathered from the site sensitivity verification differs from the screening tool designation of "low" terrestrial animal species sensitivity and it is found to be of a "very high" or "high" terrestrial animal species sensitivity, a Terrestrial Animal Species Specialist Assessment must be conducted.
- If any part of the development falls within an area of confirmed "very high" or "high" sensitivity, the assessment and reporting
 requirements prescribed for the "very high" or "high" sensitivity, apply to the entire development footprint. Development footprint
 in the context of this protocol means, the area on which the proposed development will take place and includes the area that will
 be disturbed or impacted.

Environmental screening results and assessment outcomes

The following sections contain a summary of any development incentives, restrictions, exclusions or prohibitions that apply to the proposed development site as well as the most environmental sensitive features on the site based on the site sensitivity screening results for the application classification that was selected. The application classification selected for this report is: **Transformation of land | Indigenous vegetation**.

Relevant development incentives, restrictions, exclusions or prohibitions

The following development incentives, restrictions, exclusions or prohibitions and their implications that apply to this site are indicated below.

Incentive, restriction or prohibition	Implication
Strategic Transmission	https://screening.environment.gov.za/ScreeningDownloads/Developmen
Corridor-Central corridor	tZones/Combined_EGI.pdf

Proposed Development Area Environmental Sensitivity

The following summary of the development site environmental sensitivities is identified. Only the highest environmental sensitivity is indicated. The footprint environmental sensitivities for the proposed development footprint as identified, are indicative only and must be verified on site by a suitably qualified person before the specialist assessments identified below can be confirmed.

Specialist assessments identified

Based on the selected classification, and the known impacts associated with the proposed development, the following list of specialist assessments have been identified for inclusion in the assessment report. It is the responsibility of the EAP to confirm this list and to motivate in the assessment report, the reason for not including any of the identified specialist study including the provision of photographic evidence of the site situation.

Results of the environmental sensitivity of the proposed area.

The following section represents the results of the screening for environmental sensitivity of the proposed site for relevant environmental themes associated with the project classification. It is the duty of the EAP to ensure that the environmental themes provided by the screening tool are comprehensive and complete for the project. Refer to the disclaimer.

TSF area

Bare soils with scattered vegetation cover with limited alien infestation.

4. General Comments and Recommendations

In general the site for the TSF appears to be of low ecological sensitivity due to its proximity to mining areas and disturbance and degradation to the site areas due to current mining activities. A small number of alien plants were noted in the area as well. No watercourses or wetlands were noted during the site inspection. No cultivated areas occur in the area proposed for the TSF.

Note: Two PV projects are located in very close proximity to the site - these are both Harmony projects.

Guidance notes:

- An applicant intending to undertake an activity identified in the scope of this protocol, on a site identified by the screening tool as being of "very high" or "high" sensitivity for terrestrial animal species must submit a Terrestrial Animal Species Specialist Assessment Report.
- An applicant intending to undertake an activity identified in the scope of this protocol on a site identified by the screening tool as being of "medium sensitivity" for terrestrial animal species must submit either a Terrestrial Animal Species Specialist Assessment Report or a Terrestrial Animal Species Compliance Statement, depending on the outcome of a site inspection undertaken in accordance with paragraph 4.
- An applicant intending to undertake an activity identified in the scope of this protocol on a site identified by the screening tool as being of "low" sensitivity for terrestrial animal species must submit a Terrestrial Animal Species Compliance Statement.
- Where the information gathered from the site sensitivity verification differs from the screening tool designation of "very high" or "high", for terrestrial animal species sensitivity and it is found to be of a "low" sensitivity, then a Terrestrial Animal Species Compliance Statement must be submitted.
- Where the information gathered from the site sensitivity verification differs from the screening tool designation of "low" terrestrial animal species sensitivity and it is found to be of a "very high" or "high" terrestrial animal species sensitivity, a Terrestrial Animal Species Specialist Assessment must be conducted.
- If any part of the development falls within an area of confirmed "very high" or "high" sensitivity, the assessment and reporting requirements prescribed for the "very high" or "high" sensitivity, apply to the entire development footprint. Development footprint in the context of this protocol means, the area on which the proposed development will take place and includes the area that will be disturbed or impacted.
